

ACCESSION NO_

THE UNITED STATES ARMY IN WORLD WAR II

STATISTICS

LEND-LEASE

OFFICE OF THE CHIEF OF MILITARY HISTORY DEPARTMENT OF THE ARMY WASHINGTON, D.C.

• •

FOREWORD

This summary of lend-lease (or international aid) statistics was prepared for publication as a chapter of one of the Statistics volumes of the series U. S. ARMY IN WORLD WAR II.

It was completed through the joint efforts of the Program Review and Analysis Division, Office of the Comptroller of the Army, and the Office of the Chief of Military History.

All figures herein were obtained from reports prepared by the Office, Chief of Finance, from data furnished by the Army Service Forces, the Army Air Forces and oversea theaters. The dollar value figures have been revised through March 1952 and no further revisions are contemplated. This is the first time that the revised data on dollar values have been published. The figures on numbers of items were selected from a much more detailed statement published by the Office, Chief of Finance as of 31 December 1946.

The figures on the pages that follow supersede those presented in "INTERNATIONAL AID STATISTICS, WORLD WAR II, a Summary of War Department Lend-Lease Activities Reported through 31 December 1945", published by International Branch, Headquarters, Army Service Forces. The earlier publication, however, contains some explanatory information concerning the lend-lease program that was not included in this summary.

Any suggestions for improving this chapter will be appreciated.

The Lend-Lease Act of 11 March 1941 provided a mechanism through which agencies of the United States Government furnished munitions and other supplies to foreign governments in order to promote the defense of the United States, generally without the payment of cash. 1/

This Act permitted the President to authorize the Secretary of War or the head of any other government agency to procure defense articles and to sell, lease or lend them to the governments of countries whose defense the President determined to be vital to the defense of the United States. In general, the War Department supplied items of the type it normally procured for the Army (including Air Force units), and other Federal agencies supplied types of goods and services in which they had primary interest.

The total value of goods and services furnished by the War Department under lend-lease procedures was approximately \$25,100,000,000 according to reports prepared by the Office of the Chief of Finance. This was about half the total cost of the assistance that the United States furnished Allied nations under the terms of the Lend-Lease Act. 2/<u>Types of Lend-Lease Transactions</u>

War Department lend-lease dollar values were reported under four major categories each of which represented a different type of lend-lease transaction as indicated below.

Direct lend-lease shipments from depots and other facilities in the United States accounted for about 79 percent of the total dollar value reported for the War Department. The foreign governments received such shipments at United States ports of embarkation and generally transported them overseas by ships available to them.

Some lend-lease shipments were consigned to commanding generals of United States Army forces in oversea theaters for transfer to countries that did not have adequate ocean transportation facilities at their disposal. These, which were known as commanding general shipments, amounted to about \$1,100,000,000 or 4 percent of the total dollar value of all War Department lend-lease activities.

Commanders of oversea organizations transferred articles from Army stocks and

¹/ Public Law 11, 77th Congress, "An Act to Promote the Defense of the United States." 2/ The total value of lend-lease aid including goods transferred to foreign governments, shipping services and other lend-lease charges was \$50,200,000,000 for the period ending 31 March 1951 according to the <u>Thirty-Second Report to Congress on Lend-Lease Operations</u>, <u>Appendix 1 (b)</u>, which was transmitted by the President on 3 October 1951.

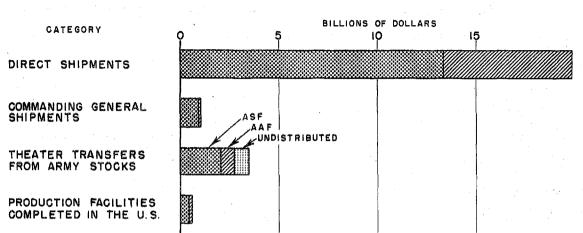

Chart LL-1-War Department Lend-Lease transactions: 1941 - 1949

Source: Table LL-1

furnished services to foreign governments which amounted to \$3,600,000,000 or about 14 percent of the total dollar value of War Department lend-lease activities reported. Such theater transfers were authorized to be made under special circumstances or to meet emergency conditions. Most of them were made in areas where troops of other allied nations operated in close coordination with United States commanders.

Facilities and equipment for use in the manufacture or production of defense articles in the United States were financed by War Department Defense Aid funds to the extent of \$560,000,000. These facilities, which were urgently needed in 1941 and in the early months of the war, included land and buildings as well as machinery and equipment. <u>Reverse Lend-Lease</u>

The Lend-Lease Act stated that the benefit to the United States might be payment or repayment in kind or property, or any other direct or indirect benefit which the President deemed satisfactory. Lend-lease agreements made under the terms of the Act provided for reciprocal aid, generally referred to as reverse lend-lease. Our allies provided the United States reverse lend-lease valued at approximately \$7,819,000,000 as an offset against the total \$50,200,000,000 supplied by the United States. The portion of total reverse lend-lease that was of primary benefit to the War Department rather than other Federal agencies is not known. The countries supplying the United States under reverse lendlease were the British Empire,\$6,752,000,000; France, \$868,000,000; Belgium, \$191,000,000, and small quantities from China, Netherlands, and the U.S.S.R. 2/

3/ For additional data on reverse lend-lease see <u>Twenty-Eight Report To Congress On Lend-Lease Operations</u>, submitted by the President on 15 July 1949.

ANALYSIS

Diversions and Returns

Oversea theater commanders diverted for the use of United States forces certain lend-lease shipments consigned to them for transfer to foreign governments. The value of diverted shipments reported was approximately \$394,000,000 (Table 2). This is equivalent to 37 percent of the value of all commanding general shipments or about 2 percent of total value of direct and commanding general shipments combined. These diversions, generally, were replaced by issues by theater commanders from their own stocks.

Foreign governments returned some of the lend-lease articles that they had received from the United States to theater commanders of United States forces. Part of the returned items were requested by theater commanders for United States use but most of them were returned voluntarily by the foreign governments. A majority of the voluntary returns were made after V-J Day.

Returns of both types, together with the diversions, had an aggregate procurement value of approximately \$1,193,000,000 or about 4.9 percent of the total reported value of all War Department lend-lease shipments and theater transfers.

Lend-lease articles returned overseas had a total procurement value of nearly \$726,000,000 and a return value of \$186,000,000. Return value was computed according to several valuation formulas which took into consideration the condition of the articles and other pertinent factors.

In addition to the articles returned in oversea theaters, some lend-lease articles that had been shipped from depots or other facilities but not yet exported from the United States were returned by foreign governments for War Department use. Returns of this type had a total value of \$73,000,000.

Returns and diversions are shown by country in Table LL-7. This table also presents data on the gross value of shipments and theater transfers and the net totals remaining after deducting returns and diversions. None of the other figures shown herein has been reduced by the amount of returns or diversions.

Procuring Services

The total value of War Department lend-lease shipments, theater transfers and production facilities is shown by procuring service in Table LL-3. Army Air Forces procurement amounted to roughly \$7,600,000,000 or 30 percent of the total and Army Service Forces procurement amounted to \$16,700,000,000 or 67 percent. Miscellaneous lend-lease

services and expenses that were reported by theater commanders but not identified by original procuring agency accounted for the remaining \$800,000,000. The theaters did not report the distribution of theater transfers according to original procuring services but this information was estimated from reported data on types of items transferred.

The value of War Department shipments is shown by procuring service in Chart LL-2. Ordnance Department shipments amounted to about 70 percent of the total reported

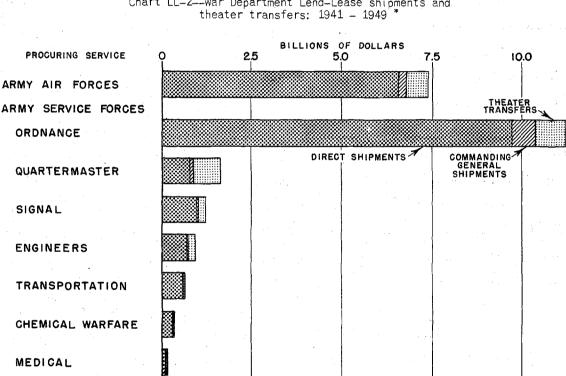

Chart LL-2--War Department Lend-Lease shipments and

*Excludes AGO, Finance Department and miscellaneous theater transfer services and expenses. Source: Table LL-3

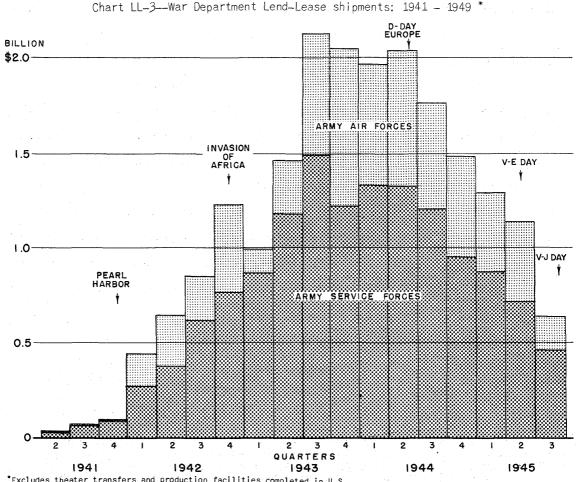

Signal Corps shipments accounted for 7 percent of the Army Serfor Army Service Forces. vice Forces total; the Quartermaster Corps, 10 percent; the Corps of Engineers, 6 perthe Transportation Corps, 4 percent; the Chemical Warfare Service 2 percent and cent: the Medical Department 1 percent.

Approximately \$37,000,000 was charged to lend-lease accounts by the Chief of Finance for such items as travel and expenses of technical missions, certain administrative expenses and cargo on American ships at the time of the Pearl Harbor attack which was turned over to the Australian Government for use in the war effort. The Adjutant General's

ANALYSIS

Office reported shipments of publications and other items valued at \$551,000. Trend of Lend-Lease Shipments

Total Army Service Forces and Army Air Forces lend-lease shipments reported for quarterly periods through September 1945 are shown in Chart LL-3. The monthly reports from which the quarterly totals were computed were not required to represent the value of shipments which actually left depots and facilities during the month for which the report was made. The figures indicate the amounts that were recorded and reported in time to meet due dates of required monthly reports. Data reported for shipments when combined into quarterly totals appear to give a fairly good indication of the phasing of transfers. Data reported for theater transfers, however, appear to be less useful for this purpose and they have been omitted from the chart and from Table LL-4.

*Excludes theater transfers and production facilities completed in U.S. Source: Table LL-4

The reported value of shipments increased sharply during 1942 and reached a maximum of \$2,100,000,000 for the period July through September 1943. A high level of shipments was maintained from July 1943, when Sicily was invaded, until June 1944, the month of the invasion of Normandy.

As more and more troops were sent overseas and the enemy was forced to retreat the value of lend-lease shipments declined. The value reported for the quarter containing V-E Day was scarcely half as large as the value for the quarter in which the Normandy invasion occurred.

Transfers made to the foreign governments on or after V-J Day (2 September 1945), amounted to about \$913,000,000 or 3.6 percent of all War Department lend-lease shipments and theater transfers (See Table LL-3). A considerable part of the total for the period after V-J Day represented services (including air transportation) and goods used in accomplishing the reoccupation of China and Manchuria. 4/ Some of the transactions after V-J Day were made on a cash reimbursement basis.

Types of Commodities

Aircraft and aeronautical materiel including accessories and reconditioning accounted for nearly 30 percent of the dollar value of all lend-lease shipments and theater transfers shown for the War Department in Table LL-5. Tanks, trucks and other combat and non-combat vehicles accounted for about 26 percent of the total. Ammunition, artillery, small arms and infantry weapons aggregated about 17 percent.

The miscellaneous services and expenses category which includes such items as military training and air transportation amounted to about 5 percent of the total reported. Machine tools and production equipment shipped overseas accounted for about 3 percent. The War Department had a considerable part of the responsibility for procuring machine tools for lend-lease early in the war, but in May 1944 this function was centralized in the Treasury Department.

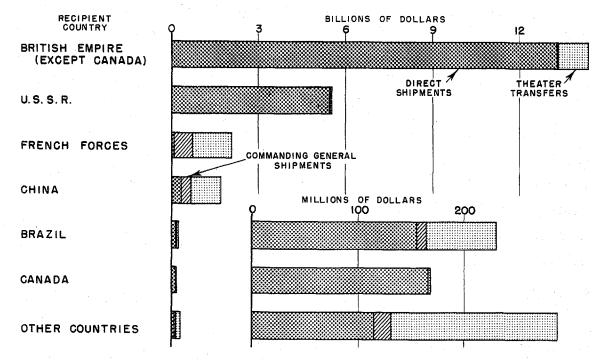

Recipient Countries

The War Department furnished lend-lease goods or services to about 50 countries during the war. The British Empire, with the exception of Canada, received approximately

^{4/} For further information on continuance of lend-lease to China, see <u>Twenty-Second Report</u> to <u>Congress on Lend-Lease Operations</u>, submitted by the President on 14 June 1946. See also the <u>Thirty-Second Report to Congress on Lend-Lease Operations</u>, submitted by the President on 3 October 1951 for additional statements on the termination of lend-lease.

ANALYSIS

Chart LL-4--War Department Lend-Lease shipments and theater transfers: 1941 - 1949

Source: Table LL-6

58 percent of the total dollar value of shipments and transfers. The U.S.S.R. received nearly 23 percent, French Forces 8 percent, China 7 percent, and Brazil and Canada a little less than 1 percent each. About 1 percent was reported for all other countries combined and 1 percent consisted of shipments to Foreign Economic Administration for subsequent transfer to other governments, and miscellaneous expenses.

Shipments and transfers to principal countries are shown in Chart LL-4. The French Forces and China received most of their lend-lease supplies through commanding general shipment and theater transfer procedures. The French Forces and China accounted for 97 percent of all commanding general shipments and 68 percent of all theater transfers. The British Empire received 28 percent of the theater transfers and other countries the remaining 4 percent.

The figures shown for the British Empire in the accompanying tables include amounts transferred to the United Kingdom and subsequently made available to British dominions (except Canada), possessions and dependencies and to other lend-lease governments.

They also include amounts transferred directly to New Zealand, Australia and other British dominions and possessions.

The amounts shown for the Foreign Economic Administration represent commodities procured by the War Department as agent for the Foreign Economic Administration for lendlease governments. This arrangement was used to supply items for which the War Department had procurement authority but which were not primarily military in character. Such commodities were valued at about \$235,000,000.

Reporting of the proposed final recipient nation for items transferred to the FEA was not required. However, two services (Quartermaster and Transportation) which had about three-fourths of these transactions, did so report, and these data are shown by countries in Table LL-13. The Air Forces, Chemical Warfare Service, Finance Department, and Adjutant General's Department, specifically reported no transactions through FEA. Data from Ordnance Department are not available.

Number of Items

Quantities of selected items which the War Department shipped to foreign governments under lend-lease procedures are shown in Table LL-14. These figures include numbers of complete end items transferred through direct and commanding general shipments from the United States but do not include theater transfers. The list covers roughly 55 percent of the value of all Army Service Forces lend-lease shipments and 65 percent of those of the Army Air Forces.

Shipments of Army Service Forces items included nearly 67,000,000 M50, 4-pound incendiary magnesium bombs (and many more in bomb clusters), nearly 18,000 pneumatic boats (No. 3 and No. 10), and 3,500 portable prefabricated barracks which were 48 feet long and 20 feet in width. A total of about 37,000 tanks were shipped, of which nearly 28,000 went to the British Empire, more than 7,000 to U.S.S.R. and about 2,000 to other countries. More than 26,000 of these (roughly 70 percent) were medium tanks of the M3 and M4 series most of which carried 75 or 76mm guns.

Shipments of self propelled weapons included 3,200 antiaircraft gun motor carriages (of which 1,100 went to U.S.S.R. and 1,600 to the British Empire), and 2,800 antitank gun motor carriages of all types. Other combat vehicles included 5,300 armored cars, 30,000 cargo and personnel carriers and 12,000 scout cars.

ANALYSIS

Approximately 792,000 trucks including 187,000 jeeps were shipped under lendlease procedures. Of the total trucks 433,000 were sent to U.S.S.R., 281,000 to the British Empire, 27,000 to French Forces and 25,000 to China. Many additional vehicles were sent including bicycles and motorcycles passenger cars and high-speed tractors, semi-trailers, and trailers.

Weapons and ammunition are more difficult to summarize because they include many more models and types than can be shown in this volume. Among these items were 218,000 machine guns (in addition to those that were standard equipment on aircraft and vehicles). Shipments of a single type of shell for 105mm howitzers totaled nearly 4,500,000 rounds.

The list includes freight cars, and thousands of complex radio sets, and millions of blankets, shirts and pairs of shoes.

The Army Air Forces shipped 43,000 aircraft of all types, 48,000 spare engines and 57,000 spare propellers. Nearly 26,000 of the aircraft were designated for the British Empire, more than 11,000 for U.S.S.R. and about 1,400 each for French Forces and China.

About 6 percent of the aircraft were heavy bombers and 7 percent were medium bombers. Light bombers comprised 16 percent of the total, fighters 40 percent, trainers 17 percent and other types 14 percent.

f/ Shell, HE, M54, for antiaircraft guns included in ammunition for aircraft guns.

EXPLANATORY NOTES

Tables LL-1 through LL-14 summarize the lend-lease activities of the War Department. They pertain to the defense articles that the Army Service Forces, the Army Air Forces, and oversea theaters made available to foreign governments under lend-lease procedures for the purpose of defeating the Axis powers.

This summary was prepared to serve Army needs only and is not an official statement to any foreign government.

DOLLAR VALUES

All of the figures on dollar values of lend-lease transactions were obtained from reports required of the War Department, by the Foreign Economic Administration. $\underline{1}/$ They have been revised through 31 March 1952 and no further revisions are contemplated.

These reports (which were known as DDA reports) were originally required by a manual issued 2 May 1941 by the Division of Defense Aid Reports of the Executive Office of the President under the title "Instructions for the Preparation of Fiscal Reports by Agencies Receiving Allocations under the Defense Aid Supplemental Appropriation Act 1941." Specific Instructions were issued by the War Department; they were summarized in War Department Technical Manual 14-705, July 1945, as amended and supplemented.

The reports were prepared by ASF Technical Services, the Army Air Forces, and oversea theaters and submitted to the Office of the Chief of Finance which prepared consolidated reports and submitted them to FEA. Dollar values of shipments and theater transfers have not been adjusted for diversions or returns unless otherwise noted.

The figures include the relatively small amounts of materials and services transferred after V-J Day. The post V-J Day transfers include certain materials procured before that time for transfer under the program; spare parts required for the maintenance of lend-lease equipment in the hands of allied governments on V-J Day; and transfers made to avoid undue hardship of lend-lease governments.

I/ For convenience, the central lend-lease agency has usually been referred to herein as the Foreign Economic Administration or FEA and statements pertaining to this agency are intended to pertain to the agencies which preceded or succeeded it, when appropriate. Official responsibility for obtaining reports and maintaining accounts and records was assigned to the Division of Defense Aid Reports, in the Executive Office of the President on 2 May 1941. Subsequent transfers placed this responsibility with the Office of Lend-Lease Administration, the Foreign Economic Administration, the State Department, and on 31 May 1946, the Treasury Department. The State Department has retained policy responsibilities. For additional information see the International Branch, Hq, ASF report: International Aid Statistics, World War II, A Summary of War Department Lend-Lease Activities Reported through 31 December 1945.

Assignment of Monetary Values

The dollar values of shipments and transfers shown on DDA reports were intended to represent, so far as practicable, all costs incurred by the War Department in connection with all lend-lease transactions. Detailed instructions for the assignment of such values (specified in TM 14-705) are summarized below.

The value of defense articles reported for shipments and transfers was required to cover the basic cost to the War Department in acquiring the article by purchase or production and an allowance for packaging, transportation, storage and incidental items which was computed as a percentage of the basic cost. In general, 10 percent was allowed for articles shipped to a foreign government within the Continental U.S. and 25 percent for articles transferred from theater stocks, or consigned to commanding generals of United States Army forces overseas earmarked for transfer to a lend-lease government. Modified percentage factors were allowed for flight-delivered aircraft and for articles delivered to foreign governments in Alaska, Canada or Mexico.

The instructions provided that services furnished to or to be performed for a foreign government and other transactions of an intangible nature (including costs.incurred or losses sustained by cancellation of requirements or in the repossession of material) were to be assigned monetary value which represented actual cost. The services and transactions referred to covered such items as transportation of personnel and property, lodging, subsistence, medical care, burial and the exchange of a new or repaired item for a repairable item of the same type.

Defense information, such as books, pamphlets, specifications and other tangible items which lend themselves to a practical system of pricing were required to be assigned monetary values which represented procurement cost or production cost.

Types of Lend-Lease Transactions

The tables present dollar value figures on the seven basic types of War Department lend-lease transactions which are described below:

DIRECT SHIPMENTS were shipments from depots or other facilities in the Continental U.S.that were consigned to foreign governments or their authorized representatives. Data on direct shipment values were obtained from DDA Form 7 which was prepared each month by AAF and ASF technical services from shipping tickets covering items shipped from U.S. depots or other facilities. The report included services rendered or performed for and

EXPLANATORY NOTES

information furnished to foreign governments. The dollar values of items repossessed by the U.S. prior to sailing from U.S. ports were excluded.

<u>Commanding general shipments</u> were shipments that were consigned through regular Army shipping channels to commanding generals of U.S. oversea theaters of operation for transfer under lend-lease to a foreign government after arrival in the theater. Data on values of commanding general shipments were obtained from DDA Form 7A which also was prepared each month by AAF and ASF from shipping tickets for items shipped from U.S. depots or facilities.

Theater transfers were transfers to lend-lease foreign governments made by commanding generals of U.S. Army forces in oversea theaters of operation or separate bases. They consisted of articles transferred from Army stocks or services furnished to foreign governments. Such transactions were authorized in cases of emergency or under special conditions or circumstances. Dollar value data on theater transfers were obtained from DDA Form 7B which was prepared bi-monthly by the theaters. The distribution shown herein by procuring service was estimated by attributing to the AAF amounts reported under aircraft and aeronautical materiel and to ASF technical services the items which they normally procured. Miscellaneous services and expenses were not allocated by procuring service.

<u>Production facilities</u> as used in this report refers to land, buildings, and equipment financed by the War Department with Defense Aid funds for use in manufacture or production of defense articles in the United States. Dollar value figures on production facilities were obtained from DDA Form 12 which was prepared by AAF and ASF.

Commanding general shipments diverted overseas to U.S. use. Commanders of over sea organizations in case of emergency or under special conditions were permitted to divert commanding general shipments in whole or in part to the uses or needs of the United States Army. Dollar value figures for these transactions were obtained from DDA Form 7D which was prepared bi-monthly by oversea organizations. Diversions must be subtracted from gross commanding general shipments reported on DDA Form 7A in order to determine the net amount which a lend-lease government received under the commanding general shipment. procedure.

Lend-lease articles returned for use. Some of the lend-lease articles that had been shipped from depots or other facilities but not yet exported from the United States were returned by foreign governments for War Department use. Dollar values for such

returns were obtained from DDA Form 7C, which was prepared each month by AAF and ASF agencies from receiving reports, tally-ins or similar documents. This report included only those articles for which the War Department had immediate use and did not cover articles damaged in shipment prior to transfer or articles returned because a foreign government no longer wanted them.

<u>Overseas returns of lend-lease articles</u>. Foreign governments returned certain lend-lease articles to U.S. Army forces in oversea theaters under two procedures: (1) some articles were returned at the request of the theater commander and (2) some articles no longer required by a foreign government were offered and accepted for return, and either physically transferred to a United States Government agency or otherwise disposed of by a United States agency. Dollar value figures for such returns were obtained from DDA Form 7E which was prepared bi-monthly by theater commanders and field agents of the Foreign Liquidation Commission in accordance with War Department Memo 35-45 dated 20 August 1945. The report covered both return values and procurement values. Return values were determined according to the types of the articles and their condition. <u>Recipient Foreign Governments</u>

The figures shown for individual foreign governments in this report represent transfers charged to those governments. The figures do not represent areas of destination because some items were transferred to one government (such as the British Empire) but physically delivered in the geographic area of another (such as France or Italy). Moreover the figures represent charges to the initial recipient although some initial recipients (notably the British Empire) retransferred some articles to other countries.

Specifically, figures shown for the British Empire include all amounts shipped or transferred to the British for some other lend-lease government. They also include all transactions reported for the United Kingdom and all British dominions and their respective possessions and dependencies, with the exception of the Dominion of Canada for which separate data are shown. Certain lend-lease transactions were recorded for Australia, New Zealand and other British Commonwealths but such figures understate the total amounts received by these areas because of retransfers from the United Kingdom and they are therefore not shown separately in this report.

Figures shown for French Forces include France, Fighting French, French Committee of National Liberation, French Africa, the French Military Mission, and other French possessions.

EXPLANATORY NOTES

Amounts procured by the War Department under FEA requisitions for a lend-lease government are excluded from figures shown for that government unless otherwise noted. They are, however, included in totals of War Department procurement and, when not indicated separately in tables showing data by recipient country, they are included in an "undistributed" category.

Purpose Classifications

The purpose classifications that have been used in this report to indicate types of lend-lease articles shipped or transferred in terms of dollar values have been based on the standard detailed classification that was required by the FEA and its predecessors for reporting on DDA forms. The required classification was established soon after the Lend-Lease Act was passed and it was designed to cover lend-lease transactions of all lend-lease procuring agencies including the Navy Department, the Department of Agriculture and the Maritime Commission as well as the War Department. It was used in some official reports to the Congress on lend-lease operations.

In presenting War Department data in this report some of the designations for commodity groups have been simplified or otherwise modified and many of the detailed classifications have been combined in such a manner that new designations became necessary. The designations used in this report and the required code numbers and designations used in preparing the DDA reports from which the dollar value figures were obtained are published in ASF, International Aid Statistics, World War II, referred to above, pp 58 and 59.

NUMBER OF ITEMS

The figures pertaining to physical quantities of lend-lease items were obtained from the two-volume publication "Lend-Lease Shipments, World War III", 31 December 1946 prepared by Office, Chief of Finance, War Department. This OCF publication was prepared from data recorded by International Division, Headquarters ASF and by International Branch, Supply Division, Assistant Chief of Air Staff-4, Headquarters, AAF.

The figures pertaining to the quantity of aircraft, spare engines and propellers were based on the "Quarterly Report of Lend-Lease Transfers of Aircraft and Spares to Beneficiary Governments", UNB-3, submitted to Headquarters, AAF by Headquarters, Air Materiel Command, Wright Field, Dayton, Ohio.

The figures cover direct and commanding general shipments but exclude theater transfers and all transfers made after V-J Day. They incorporate revisions in records of the International Division, Headquarters, ASF through June 1946 and it is believed that very few changes were made since that date. 2/ The figures were based on shipping documents with the exception of those for the French Forces which include issues per tables of organization and equipment applicable to the French Rearmament Program (First Eight Divisions) as well as non-rearmament program shipments.

Items Selected

The quantitative data presented in Table LL-14 cover only a small part of the total number of different items transferred. The basic OCF publication from which the data were extracted contains approximately 540 pages but the subtitle of this report indicates that it is "A summary of important items furnished foreign governments . . .".

The table covers practically all individual end items in the OCF publication for which lend-lease transfers amounted to \$1,000,000 or more. The values were computed from ASF "Monthly Progress Report, Section 2-G, International Aid", August-September, 1945 (this was the last issue published and some figures in it differ from those in the OCF publication used as a source of Table LL-14 because it contained later revisions).

For some important categories where application of the "1,000,000 or more" principle would give almost complete coverage all items were included in order that totals for the categories could be shown. Among the major categories for which coverage is considered complete are tanks, self-propelled weapons, trucks, semi-trailers, trailers, aircraft, spare engines and spare propellers.

No totals are shown for categories for which some of the items have been omitted or the figures considered non-additive. For some categories the items omitted represent a relatively large part of the category totals.

The items for which data are presented, however, are believed to represent roughly 65 percent of the dollar value of all Army Air Forces shipments and roughly 55 percent of the dollar value of all Army Service Forces shipments. These percentages are not necessarily representative of the coverage for individual recipient countries, or technical services.

2/ Most of the information on sources and coverage of quantitative data presented in these Explanatory Notes was extracted from the Introduction, Appendix A, and Appendix B of the OCF publication referred to above from which the figures were obtained.

EXPLANATORY NOTES

Medical items are omitted entirely from Table LL-14 (and from the OCF report) because they were numerous and nearly all of them relatively small in aggregate value.

The items listed are complete end items. That is, combat vehicles include standard weapons and communications equipment and remote-controlled antiaircraft weapons include standard fire control equipment. The nomenclature used throughout is generally more detailed than that in the basic source.

Recipient Foreign Governments

The figures for individual countries have the same general characteristics as the figures on lend-lease dollar values explained above. To save space, however, data for all American Republics are shown in a single column and those for other countries that received relatively small amounts have also been combined. Data for all countries are shown separately in the OCF report from which these figures were compiled.
